Experiment No. 1.1

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code:22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 08-10-2022

1. Suppose recently your company switched their operating systems from Microsoft to Linux. Now you have all documents in MS word, what you will do to save all of that work in Linux operating system?
2. Perform installation of Redhat Linux in dual boot. Explain the detailed steps along with screenshots.

Task to be done:

Answer: 1

Access Windows MS Word documents in Linux OS: -

You can use LibreOffice in Linux OS to access MS word documents. LibreOffice is the robust word processing application that read and write files in .doc and .docx file format.

LibreOffice can be installed using package manager, to do so, follow these commands: -

- Step 1- Open terminal window
- Step 2- Enter command “SUDO YUM UPDATE && SUDO YUM INSTALL LIBREOFFICE” without quotes to install the LibreOffice.
- Step 3- After installation enter command “LIBREOFFICE” without quotes to access the libre office. You can also access it directly from the application list.

Answer: 2

Steps to Install CentOS in Dual Boot with Windows OS: -

Prerequisites: -

- An active internet connection.
- Minimum 8 GB Flash drive.
- CentOS ISO image file,
- Balena Etcher Application to create bootable device Minimum 50 GB storage space on Secondary storage device.
- Hands on knowledge of Linux and Windows OS.

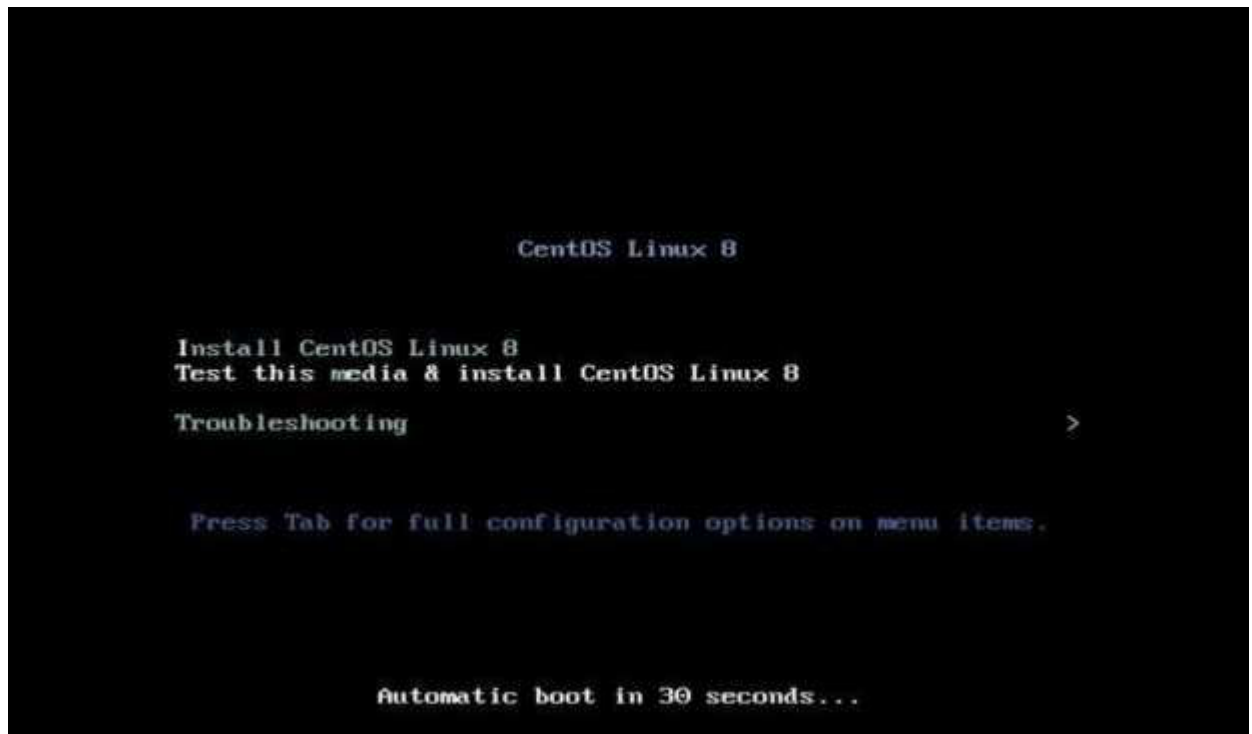

Important Notes: -

- There are no chances of existing data loss if you follow these steps as they are, still, it is recommended to have backup of your existing data in case anything goes wrong.

- If you're shrinking your c:/ drive to install the Linux OS, make sure minimum 120 GB storage space available after the shrinking on your e:/ drive.
- Turn off the SECURE BOOT from bios settings.
- If you are using a laptop with factory installed SSD storage drive. Check in your bios settings if the storage controller is not set to Intel RST Controller, because Linux file system doesn't support Intel RST Controlled storage device and while installation, Linux installer didn't detect the storage device.

Now installation steps:

- Step1- Create a live USB or disk
- Step 2- Make a new partition for Linux operating system: (Make partition in windows operating system using 30-40 GB of space)
- Step 3- Boot in to live USB: You have to restart the system after inserting the Live USB in order to start boot after selecting boot option as USB
- Step 4- Start the installation

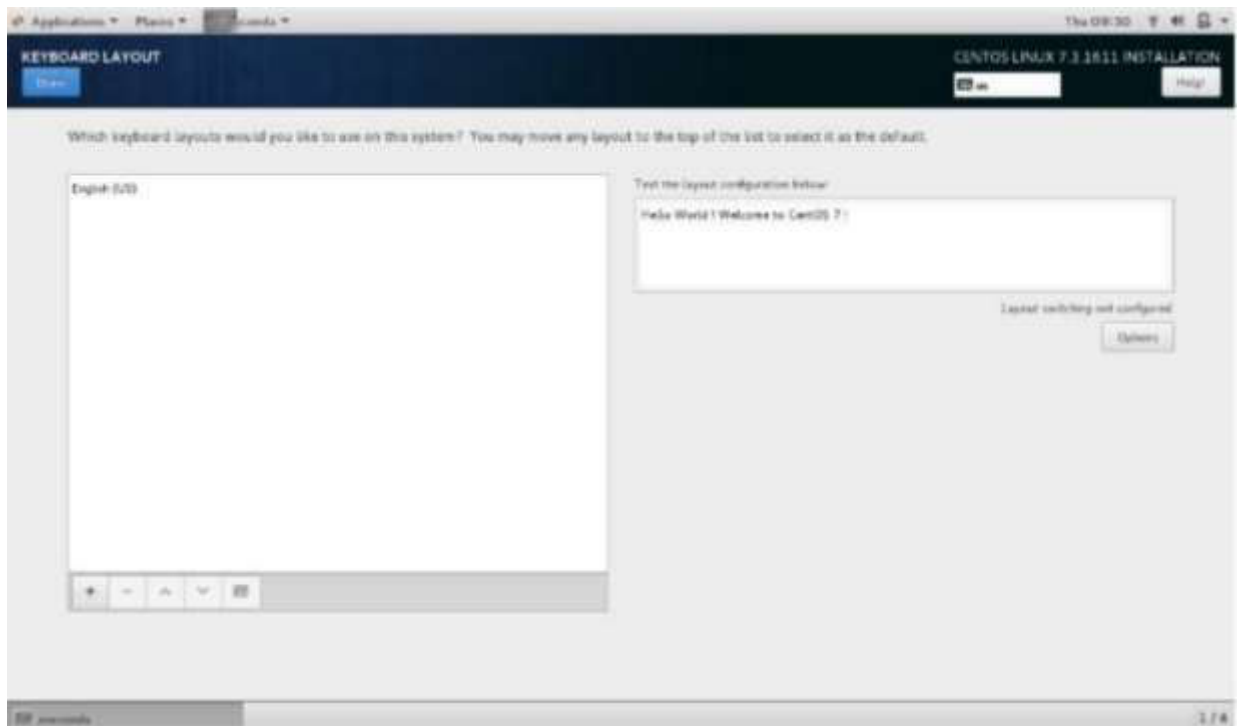

- Step 5- Configure the Date and Time: The world's map will be displayed. Click on your current physical location on the map to set your time.

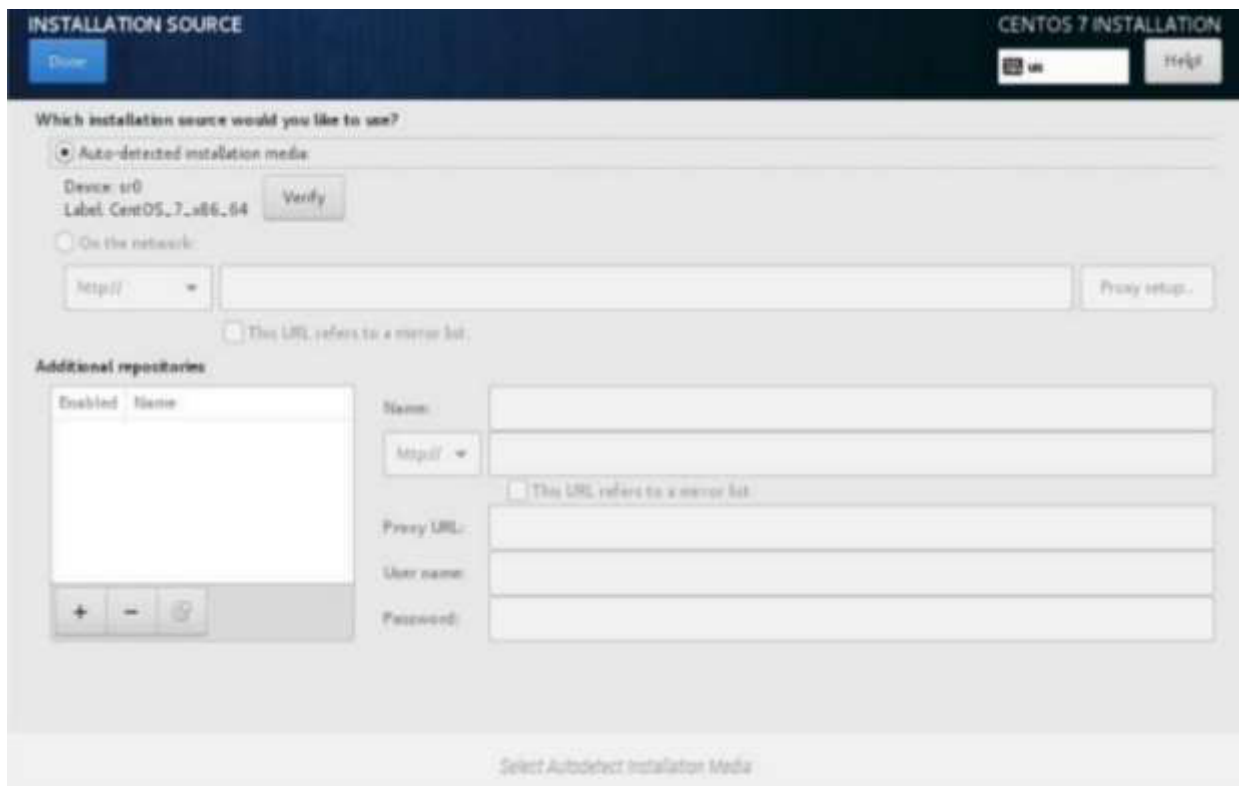

- Step 6- Configure Language Support: to configure your language settings

- Step 7-Configure Keyboard: You can test the keyboard configuration here.

- Step 8- Select Installation Source: to customize your installation using other sources other than the traditional USB/DVD.

- Step 9- Configure Software Selection: This is the step where you will select your preferred system installation software

SOFTWARE SELECTION CENTOS LINUX 8 INSTALLATION

[Done](#) [US](#) [Help!](#)

Base Environment

- ☐ **Server with GUI**
An integrated, easy-to-manage server with a graphical interface.
- ☐ **Server**
An integrated, easy-to-manage server.
- ☒ **Minimal Install**
Basic functionality.
- ☐ **Workstation**
Workstation is a user-friendly desktop system for laptops and PCs.
- ☐ **Custom Operating System**
Basic building block for a custom CentOS system.
- ☐ **Virtualization Host**
Minimal virtualization host.

Additional software for Selected Environment

- ☐ **Guest Agents**
Agents used when running under a hypervisor.
- ☐ **Standard**
The standard installation of CentOS Linux.
- ☐ **Legacy UNIX Compatibility**
Compatibility programs for migration from or working with legacy UNIX environments.
- ☐ **Container Management**
Tools for managing Linux containers.
- ☒ **Development Tools**
A basic development environment.
- ☐ **.NET Core Development**
Tools to develop .NET and .NET Core applications.
- ☐ **Graphical Administration Tools**
Graphical system administration tools for managing many aspects of a system.
- ☐ **Headless Management**
Tools for managing the system without an attached graphical console.
- ☐ **Network Servers**
These packages include network-based servers such as DHCP, Kerberos and NIS.

- Step10- Configure Partitioning: This is the part where you configure your hard disk.

INSTALLATION DESTINATION CENTOS LINUX 8 INSTALLATION

[Done](#) [US](#) [Help!](#)

Device Selection
Select the device(s) you'd like to install to. They will be left untouched until you click on the main menu's "Begin Installation" button.

Local Standard Disks

50 GiB

ATA VBOX HARDDISK
sda / 50 GiB free

Disks left unselected here will not be touched.

Specialized & Network Disks

[Add a disk...](#)

Disks left unselected here will not be touched.

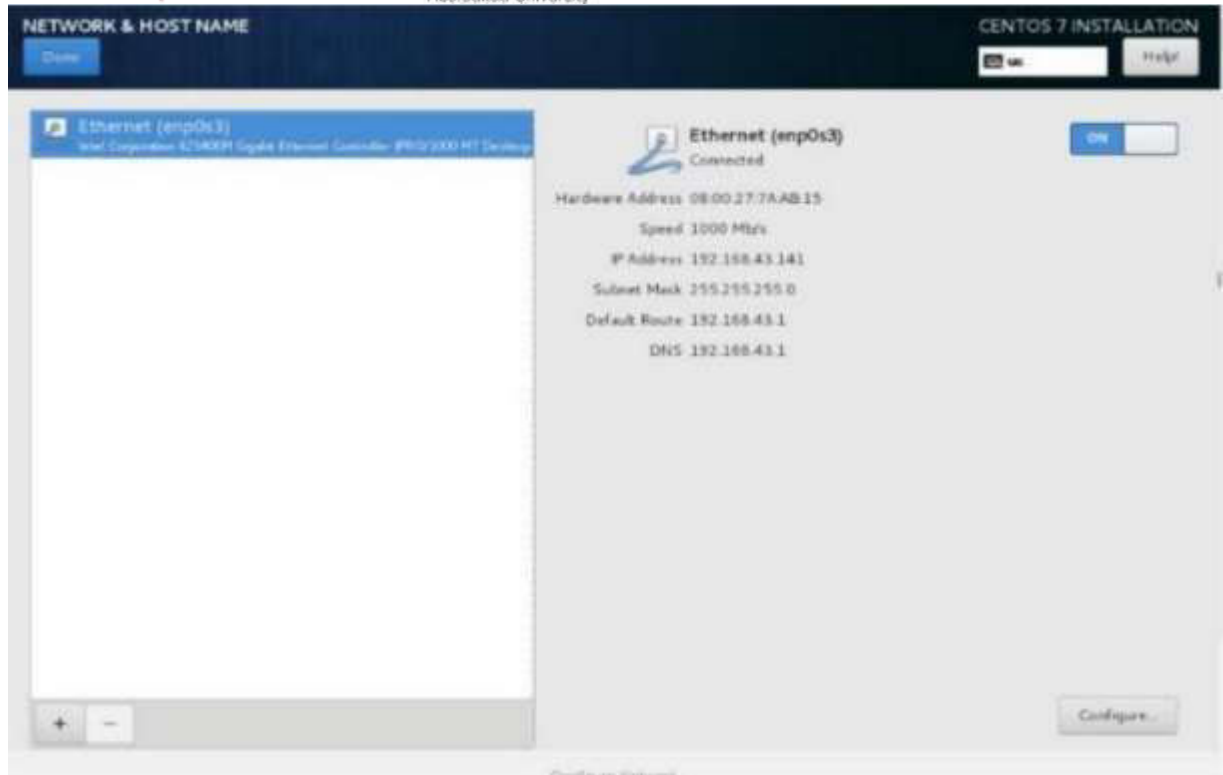

Storage Configuration

☒ Automatic ☐ Custom

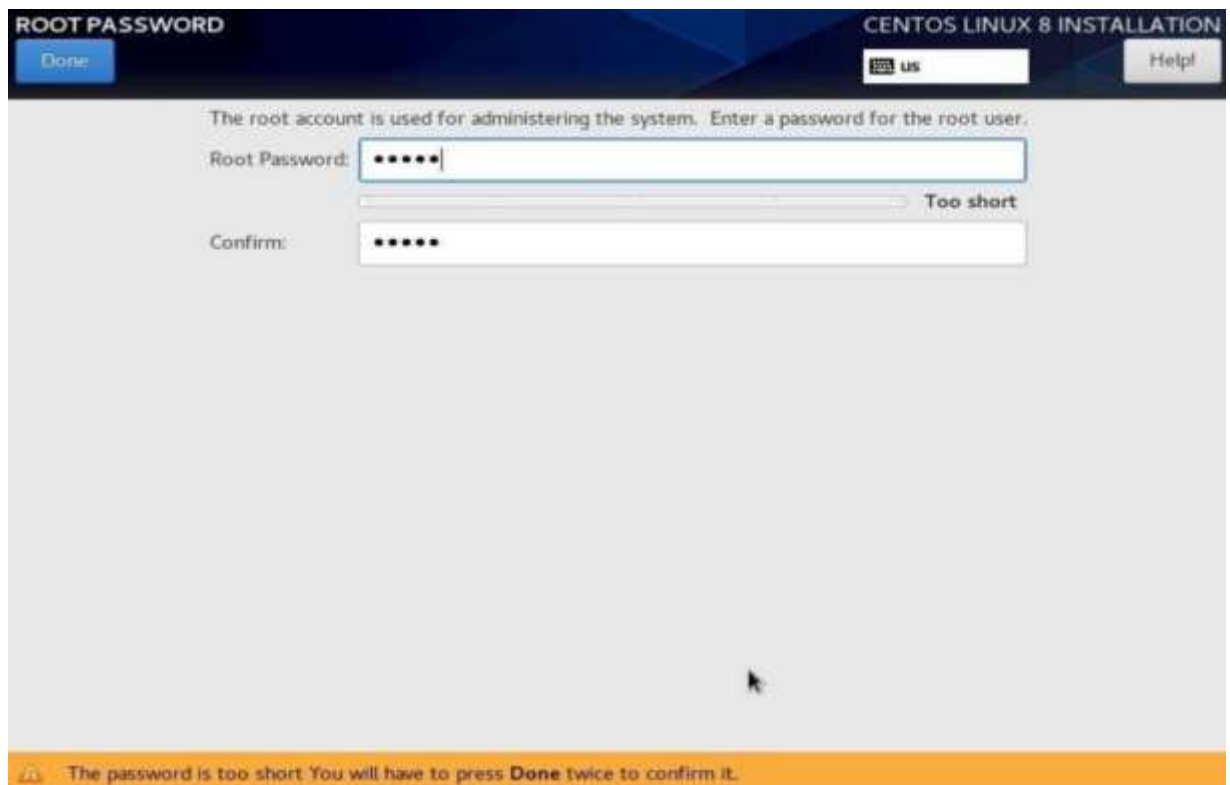

☐ I would like to make additional space available.

[Full disk summary and boot loader...](#) 1 disk selected; 50 GiB capacity; 50 GiB free [Refresh...](#)

- Step 11- Configure Networking & Hostname: for network related settings.

- Step 12- Begin CentOS 7 Installation: set root user password and create a user

- Step 14- One installation is complete then Remove the USB button and hit the 'Reboot' button to restart your system.
- Step 15- Click on 'LICENSE INFORMATION': Accept the license
- Step 16- Finish configuration

Learning outcomes (What I have learnt):

1. I learnt to install CentOS.
2. I learnt to use Linux.

Evaluation Grid:

Experiment No. 1.2

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code:22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 07-11-2022

1. Write a command used to display existing partitions and sizes using 2 different commands. After than compare the outputs of both,

After this create a new 400MB primary partition and 2 extended partition under that primary partition and check whether both partitions are created or not.

Task to be done:

Answer: 1

Steps/Commands involved to perform practical:

Steps of Answer-1

1. Open Linux terminal
2. Write fdisk -l to view the partitions
3. Select the partition using fdisk /dev/sda1
4. Disk Partitions displayed with details

We can also view Disk partitions using lsblk. it displays block devices, when used with the -f option, it prints file system type on partitions as well, now Creating primary partition and 2 extended partitions

1. Verify the partitions available on the server: fdisk -l
2. Choose which device you wish to use (such as /dev/sda or /dev/sdb)
3. Run fdisk /dev/sdX (where X is the device you would like to add the partition to)
4. Type 'n' to create a new partition.
5. Specify where you would like the partition to end and start. You can set the number of MB of the partition instead of the end cylinder. For example: 400M
6. Type 'p' to view the partition, and type 'w' to save the partition

Output of Answer 1:

Viewing Disk partition using fdisk command

```

```

creating a primary partition and 2 extended partition under that primary

```
(root@KALI)-[/home/rj20]
# fdisk /dev/sda1

Welcome to fdisk (util-linux 2.36).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

The device contains 'ext4' signature and it will be removed by a write command.

Device does not contain a recognized partition table.
Created a new DOS disklabel with disk identifier 0x4436f61b.

Command (m for help): n
Partition type
   p   primary (0 primary, 0 extended, 4 free)
   e   extended (container for logical partitions)
Select (default p): p
Partition number (1-4, default 1): 1
First sector (2048-41328639, default 2048): 41328639

Created a new partition 1 of type 'Linux' and of size 512 B.

Command (m for help): n
Partition type
   p   primary (1 primary, 0 extended, 3 free)
   e   extended (container for logical partitions)
Select (default p): e
Partition number (2-4, default 2): 2
First sector (2048-41328638, default 2048): 41328638

Created a new partition 2 of type 'Extended' and of size 512 B.

Command (m for help): i
Partition number (1,2, default 2):
```

Checking whether Partitions created or not

```
Device      Boot   Start      End Sectors  Size Id Type
/dev/sda1p1             41328639 41328639      1 512B 83 Linux
/dev/sda1p2             41328638 41328638      1 512B  5 Extended
```

Partition table entries are not in disk order.

Command (m for help): i

Partition number (1,2, default 2): 1

```
Device: /dev/sda1p1
Start: 41328639
End: 41328639
Sectors: 1
Cylinders: 1
Size: 512B
Id: 83
Type: Linux
Start-C/H/S: 524/150/10
End-C/H/S: 524/150/10
```

Command (m for help): i

Partition number (1,2, default 2): 2

```
Device: /dev/sda1p2
Start: 41328638
End: 41328638
Sectors: 1
Cylinders: 1
Size: 512B
Id: 5
Type: Extended
Start-C/H/S: 524/150/9
End-C/H/S: 524/150/9
```

Learning outcomes (What I have learnt):

1. I learnt to display disk information.
2. I learnt to create partition.

Evaluation Grid:

Sr. No.	Parameters	Marks Obtained	Maximum Marks
1.	Demonstration and Performance (Pre Lab Quiz)		5
2.	Worksheet		10
3.	Post Lab Quiz		5

Experiment No. 1.3

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code:22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 07-11-2022

1. Create the directory DIR1 and inside this create another directory DIR2 and inside DIR2 create directory DIR3

Using a one single command. Show the path of the DIR3 directory. Create a blank file ABC.txt. Add the contents using cat command. Show long list of this directory also show hidden files.

Task to be done:

Answer- 1

To create nested directories, we do:

```
mkdir -p dir1/dir2/dir3
```

- The **-p** option allows you to create parent directory if it is not created already. The above command creates dir2 within dir1 and dir3 within dir2. Here, dir1 is the parent directory to dir2 and dir3. dir2 is the parent directory to dir3. In other words, dir2 is the child directory of dir1 and dir3 is the child directory of dir2 and dir1.

To create a blank file and adding contents to it using cat command, we do:

```
touch dir1/dir2/dir3/ABC.txt  
cat > dir1/dir2/dir3/ABC.txt  
This is a dummy text
```

Steps for experiment/practical: copy and paste your code here/screenshot

```
sourabh@localhost:/home/sourabh/Desktop
File Edit View Search Terminal Help
[root@localhost Desktop]# mkdir -p dir1/dir2/dir3
[root@localhost Desktop]# ls -l
total 0
drwxr-xr-x. 3 root root 18 Nov  6 14:57 dir1
[root@localhost Desktop]# tree
.
├── dir1
│   └── dir2
│       └── dir3
3 directories, 0 files
[root@localhost Desktop]#
```

```
sourabh@localhost:/home/sourabh
File Edit View Search Terminal Help
[root@localhost sourabh]# mkdir -p dir1/dir2/dir3
[root@localhost sourabh]# touch Desktop/dir1/dir2/dir3/ABC.txt
[root@localhost sourabh]# cat > Desktop/dir1/dir2/dir3/ABC.txt
This is dummy text
[root@localhost sourabh]# tree Desktop/dir1
Desktop/dir1
├── dir2
│   └── dir3
│       └── ABC.txt
2 directories, 1 file
[root@localhost sourabh]#
```

Learning outcomes (What I have learnt):

1. Learnt to create nested directories.
2. I learnt to create a blank file.
3. Learnt to append a file

LINUX ADMINISTRATION LAB

Experiment No. 1.4

Student Name: Sourabh Singh
UID: 22MCC20158
Semester: 1st

Subject Code: 22CAP-648
Section/Group: 22MCD-2/B
Date of Performance: 28-11-2022

Create a blank file ABC.txt. Add the contents using vi-editor as follows

“Have more than you show,

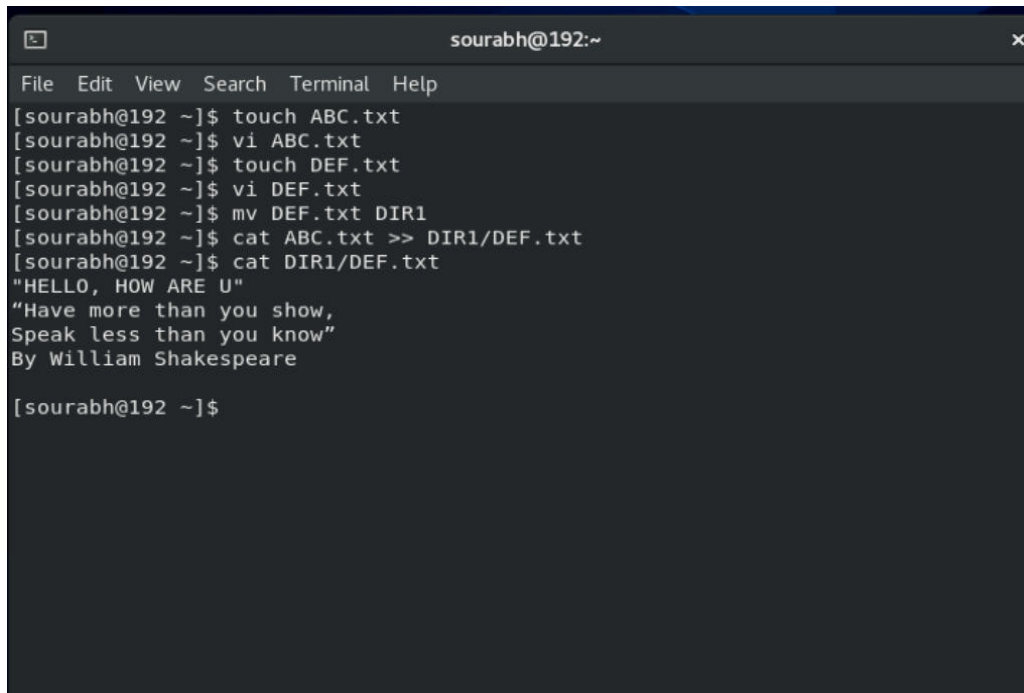

Speak less than you know”

By William Shakespeare

Save and quit from the file. Create another file named DEF.txt and enter the content “HELLO, HOW R U?” in it.

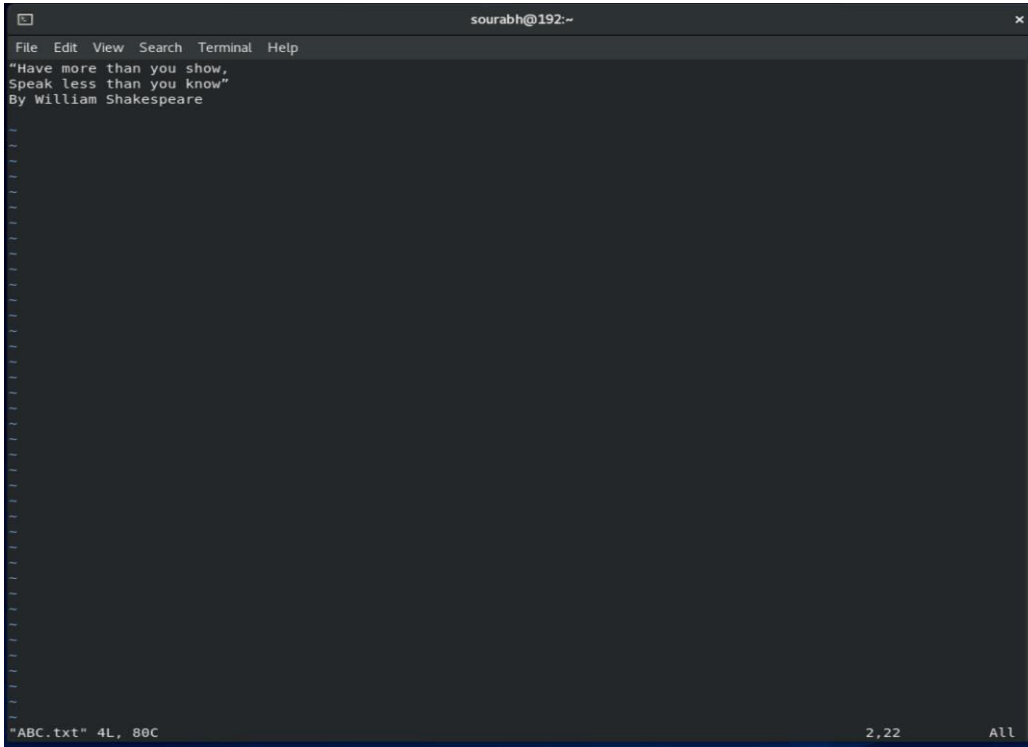

Now delete “R” and edit it as “ARE” and now move this file to another directory DIR1. At last append the contents of ABC.txt to DEF.txt. After appending store the contents in DEF.txt file.

Steps for experiment/practical: copy and paste your code here/screenshot

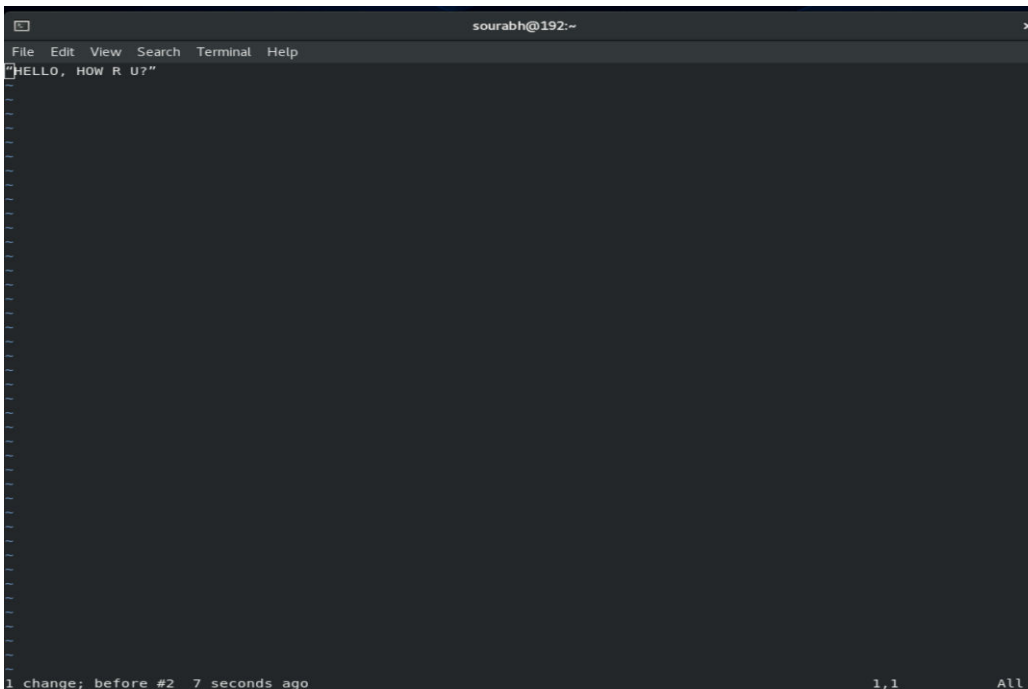

```
sourabh@192:~  
File Edit View Search Terminal Help  
[sourabh@192 ~]$ touch ABC.txt  
[sourabh@192 ~]$ vi ABC.txt  
[sourabh@192 ~]$ touch DEF.txt  
[sourabh@192 ~]$ vi DEF.txt  
[sourabh@192 ~]$ mv DEF.txt DIR1  
[sourabh@192 ~]$ cat ABC.txt >> DIR1/DEF.txt  
[sourabh@192 ~]$ cat DIR1/DEF.txt  
"HELLO, HOW ARE U"  
"Have more than you show,  
Speak less than you know"  
By William Shakespeare  
[sourabh@192 ~]$
```

1) ABC.txt File -

A screenshot of a terminal window titled 'sourabh@192:~'. The window has a menu bar with 'File', 'Edit', 'View', 'Search', 'Terminal', and 'Help'. The terminal displays the content of a file named 'ABC.txt', which contains the text: "Have more than you show,
Speak less than you know"
By William Shakespeare. The status bar at the bottom shows '"ABC.txt" 4L, 80C', '2,22', and 'All'.

2) DEF.txt File -

A screenshot of a terminal window titled 'sourabh@192:~'. The window has a menu bar with 'File', 'Edit', 'View', 'Search', 'Terminal', and 'Help'. The terminal displays the content of a file named 'DEF.txt', which contains the text: HELLO, HOW R U?". The status bar at the bottom shows '1 change; before #2 7 seconds ago', '1,1', and 'All'.

Experiment No. 2.3

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code: 22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 26-12-2022

1. Aim/Overview of the practical:

Task to be done: You wish to restore the file named ABC.txt which was backed up in the tarfile with name MyBackup.tar. What command should you type? Use an option of gzip command to compress a tar file MyBackup.tar. Now create a file with name MyBackUp.tar and then try to search a file named MyBackup.tar using regular expressions after executing listing command.

Steps for experiment/practical: copy and paste your code here/screenshot

i. Creating MyBackup.tar with ABC.tx

```
$cat > ABC.txt
```

```
Hello this is ABC.txt
```

```
$tar -cvf MyBackup.tar ABC.txt
```

ii. Unarchiving MyBackup using tar command with -x option

```
$tar -xvf MyBackup.tar
```

iii. Compressing MyBackup.tar using gzip command

```
$gzip MyBackup.tar
```

iv. Creating file MyBackUp.tar

```
$tar -cvf MyBackUp.tar ABC.txt
```

v. Searching MyBackup.tar using regular expression

```
$ls | grep "MyBackup.tar"
```

2. Result/Output/Writing Summary:

```

SBK@localhost:~
File Edit View Search Terminal Help
[SBK@localhost ~]$ cat abc.txt
Hello this is abc text file
[SBK@localhost ~]$ tar -cvf mybackupp.tar abc.txt
abc.txt
[SBK@localhost ~]$ tar -xvf mybackupp.tar
abc.txt
[SBK@localhost ~]$ gzip mybackupp.tar
[SBK@localhost ~]$ tar -cvf mybackupp.tar abc.txt
abc.txt
[SBK@localhost ~]$ ls | grep "mybackupp.tar"
mybackupp.tar
mybackupp.tar.gz
[SBK@localhost ~]$

```

Learning outcomes (What I have learnt):

- Learn about compression and tar
- Learn about different commands

Evaluation Grid:

Sr. No.	Parameters	Marks Obtained	Maximum Marks
1.	Demonstration and Performance (Pre Lab Quiz)		5
2.	Worksheet		10
3.	Post Lab Quiz		5

LINUX ADMINISTRATION LAB

Experiment No. 3.1

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code: 22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 04-01-2023

1. Aim/Overview of the practical:

Task to be done:

Q1) How to temporarily turn off enforcing mode without having to reboot?

What are the access control attributes used by SELinux type enforcement security to control access?

Ans:

Turning off enforcing mode without having to reboot

Occasionally you may need to perform an action that is normally prevented by policy. Run the command `setenforce 0` to turn off enforcing mode in real time. When you are finished, run `setenforce 1` to turn enforcing back on.

```
# setenforce 0
```

Or we can also change value of `/sys/fs/selinux/enforce` to `0`

```
# echo 0 > /sys/fs/selinux/enforce
```

The access control attributes used by SELinux type enforcement security to control access are -

In SELinux, type enforcement is implemented based on the labels of the subjects and objects. SELinux by itself does not have rules that say `"/bin/bash can execute /bin/lis"`. Instead, it has rules similar to "Processes with the label `user_t` can execute regular files labeled `bin_t`". SELinux has a particular feature that allows grouping access control rules, called attributes. A domain or type can be assigned an attribute, and access control rules can be defined on attributes (both on subject level, object level or both). When checking the access of a particular subject, its label is checked for supported attributes and rules on that attribute are accepted as well. Similarly, the label of the object is checked for attributes and rules on that attribute are also used. This allows a single rule to be used to say that "Every user domain can execute files labeled as `bin_t`". Through attributes, this rule is valid for all types that are assigned the user domain attribute.

Steps for experiment/practical: copy and paste your code here/screenshot

```
sourabh@192:/home/sourabh
File Edit View Search Terminal Help
[root@192 sourabh]# getenforce
Enforcing
[root@192 sourabh]# setenforce 0
[root@192 sourabh]# getenforce
Permissive
[root@192 sourabh]#
```

Learning outcomes (What I have learnt):

- 1. I have learnt about SELinux**
- 2. I have learnt about SELinux mode**

Evaluation Grid:

Experiment No. 3.2

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code:22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 07-01-2023

1. Aim/Overview of the practical:

Q.1

Schedule echo command to type ur UID on 30th June 08:30 pm. Perform tar command to backup file1 and file2 on 5th July at 11am and 4pm. perform echo ur name on very weekday during working hours.

Q.2

Schedule two jobs of echo with at, display the at queue and remove a job. schedule ls command to run every four hour. display the crontab file of your normal user Then , remove your crontab file.

Steps for experiment/practical: copy and paste your code here/screenshot

Ans:1

First of all, open crontab file for a user using “crontab -e” and then type following command-

a) Schedule echo command to type your UID on 30th June 08:30 pm:

30 20 30 06 * echo id -u

b) Perform tar command to backup file1 and file2 on 5th July at 11am and 4pm:

00 11, 16 05 07 * tar -czf archive_file.rar file1 file2

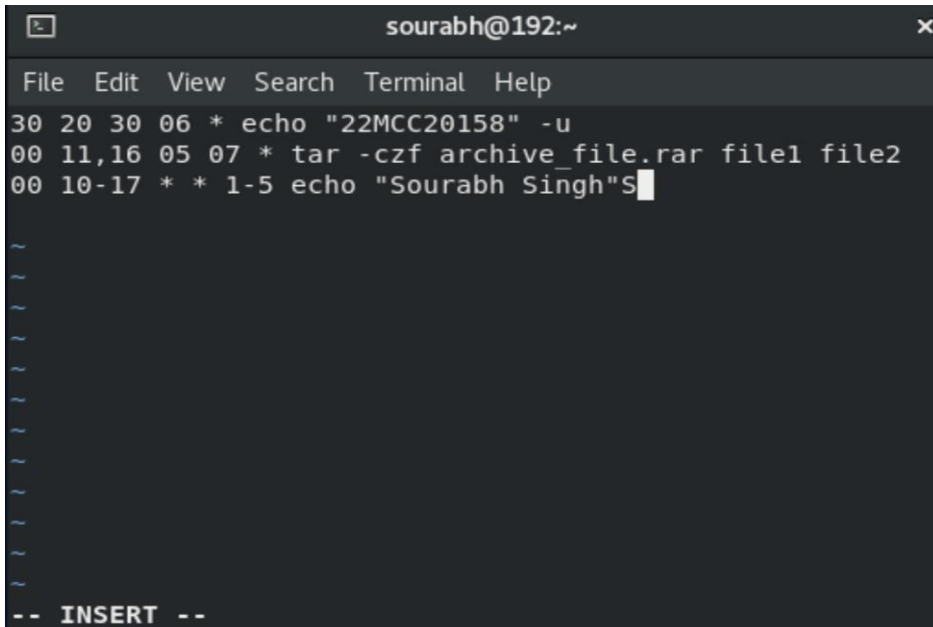

c) Perform echo your name on every weekday during working hours:

00 10-17 * * 1-5 echo "Sourabh Singh"

Ans:2

- a) Schedule two jobs of echo with at:
 at 11:30 PM 01/26/2023 at> echo "I am in MCA-CCD"
 at> echo "This task is scheduled using at command" at> ^D
- b) Display the at queue:
 press Control-D on a new line, and your command will be placed in the queue
- c) To remove a job: **at -r 22**
- d) Schedule ls command to run every four hours: *** */4 * * * ls**
- e) Display the crontab file of your normal user: **crontab -l [username]**
- f) Remove your crontab file: **crontab -r [username]**

Result/Output/Writing Summary:

```
sourabh@192:~  
File Edit View Search Terminal Help  
30 20 30 06 * echo "22MCC20158" -u  
00 11,16 05 07 * tar -czf archive_file.rar file1 file2  
00 10-17 * * 1-5 echo "Sourabh Singh"S  
~  
~  
~  
~  
~  
~  
~  
~  
~  
~  
-- INSERT --
```

```
sourabh@192:~
File Edit View Search Terminal Help
[sourabh@192 ~]$ crontab -e
crontab: installing new crontab
[sourabh@192 ~]$ crontab -l
30 20 30 06 * echo "22MCC20158" -u
00 11,16 05 07 * tar -czf archive_file.rar file1 file2
00 10-17 * * 1-5 echo "Sourabh Singh"

[sourabh@192 ~]$
```

Learning outcomes (What I have learnt):

Got to know about editing text files in Vi editor and it's various functions

Evaluation Grid:

Experiment No. 3.3

Student Name: Sourabh Singh

UID: 22MCC20158

Semester: 1st

Subject Code:22CAP-648

Section/Group: 22MCD-2/B

Date of Performance: 07-01-2023

1. Aim/Overview of the practical:

Q.1

Write shell script program to swap two numbers by using third variable.

Write a shell script to print this following sequence.

0

1 0

2 1 0

3 2 1 0

4 3 2 1 0

5 4 3 2 1 0

Q.2

Write a shell script to print the number is prime or not.

Write a shell script to print number 1 to 10 use continue at 6.

Steps for experiment/practical: copy and paste your code here/screenshot

```
first=5
second=10

third_var=$first
first=$second
second=$third_var

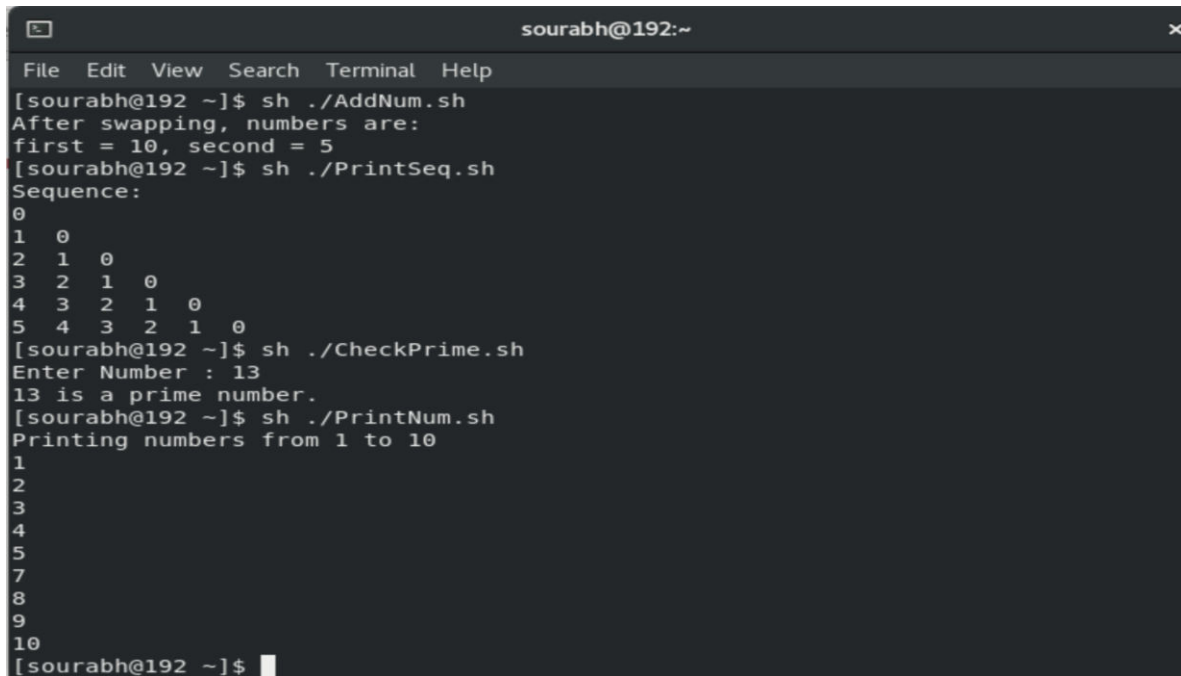

echo "After swapping, numbers are:"
echo "first = $first, second = $second"
```

```
echo "Sequence: "
for i in $(seq 0 5)
do
    for j in $(seq $i -1 0)
    do
        echo -n $j " "
    done
done
echo
done
```

```
#!/bin/bash
echo -e "Enter Number : \c"
read n
for((i=2; i<=$n/2; i++))
do
    ans=$(( n%i ))
    if [ $ans -eq 0 ]
    then
        echo "$n is not a prime number."
        exit 0
    fi
done
echo "$n is a prime number."
```

```
echo "Printing numbers from 1 to 10"
for i in {1..10}
do
    if [ $i -eq 6 ]
    then continue
fi
echo "$i"
done
```

Result/Output/Writing Summary:

```
sourabh@192:~
File Edit View Search Terminal Help
[sourabh@192 ~]$ sh ./AddNum.sh
After swapping, numbers are:
first = 10, second = 5
[sourabh@192 ~]$ sh ./PrintSeq.sh
Sequence:
0
1 0
2 1 0
3 2 1 0
4 3 2 1 0
5 4 3 2 1 0
[sourabh@192 ~]$ sh ./CheckPrime.sh
Enter Number : 13
13 is a prime number.
[sourabh@192 ~]$ sh ./PrintNum.sh
Printing numbers from 1 to 10
1
2
3
4
5
7
8
9
10
[sourabh@192 ~]$
```

Learning outcomes (What I have learnt):

- 1) Learnt to swap two numbers
- 2) Learnt to print a sequence of numbers
- 3) Learnt to write a shell script to check whether a number is prime or not
- 4) Learnt to print number between a given range
